PROYECTO SALESFORCE

Alejandro ESTEBAN GIL - David MOLINOS GRACIA

Crear componentes web Lightning PRIMER MÓDULO LWC

```
<?xml version="1.0" encoding="UTF-8"?>
 <LightningComponentBundle xmlns="http://soap.sforce.com/2006/04/metadata" fqn="helloWorld">
     <apiVersion>59.0</apiVersion>
     <isExposed>true</isExposed>
     <targets>
         <target>lightning__AppPage</target>
          <target>lightning__RecordPage</target>
          <target>lightning HomePage</target>
     </targets>
 tughtningComponentBundle>
 ■ helloWorld.html × JS helloWorld.js
 force-app > main > default > lwc > helloWorld > 🧧 helloWorld.html > 🔗 template > 😭 lightning-card > 😭 div.slds-m-around_medium
          dightning-card title="HelloWorld" icon-name="custom:custom14">
             <div class="slds-m-around medium">
                 Hello, {greeting}!
                 <lightning-input label="Name" value={greeting} onchange={changeHandler}></lightning-input>
          </lightning-card>
       </template>
 ■ helloWorld.html
                         force-app > main > default > lwc > helloWorld > JS helloWorld.js > 😝 HelloWorld > 🕤 changeHandler
          import { LightningElement } from 'lwc';
          export default class HelloWorld extends LightningElement {
              greeting = 'World';
              changeHandler(event) {
                   this.greeting = event.target.value;

 MelloWorld
                                   Chatter
                                                                            Agregar Componente(s) aquí
 Hello, World!
                                  MelloWorld
                                    Hello, World!
```

Otra forma de crear un LWC

C:\Users\David\Desktop\DAVID\00.-FP\04.-SGE\SALESFORCE\PROYECTO\Proyecto-Salesforce\proyecto>sf lightning generate component -n myF irstWebComponent -d force-app/main/default/lwc --type lwc

-n: nombre del LWC

-d: la ruta donde se creará

-type : indica que será un lwc

```
C:\Users\David\Desktop\DAVID\00.-FP\04.-SGE\SALESFORCE\PROYECTO\Proyecto-Salesforce\proyecto>sf lightning generate component -n myF irstWebComponent -d force-app/main/default/lwc --type lwc

> Warning: @salesforce/cli update available from 2.20.6 to 2.30.8.

target dir = C:\Users\David\Desktop\DAVID\00.-FP\04.-SGE\SALESFORCE\PROYECTO\Proyecto-Salesforce\proyecto\force-app\main\default\lwc\myFirstWebComponent\myFirstWebComponent.js

create force-app\main\default\lwc\myFirstWebComponent\myFirstWebComponent.html

create force-app\main\default\lwc\myFirstWebComponent\__tests__\myFirstWebComponent.test.js

create force-app\main\default\lwc\myFirstWebComponent\myFirstWebComponent.js-meta.xml
```

Para incorporar los LWC se puede seguir:

Primero vamos al Generador de aplicación Lightning

Seleccionamos

Nuevo

Elegimos que tipo de página queremos:

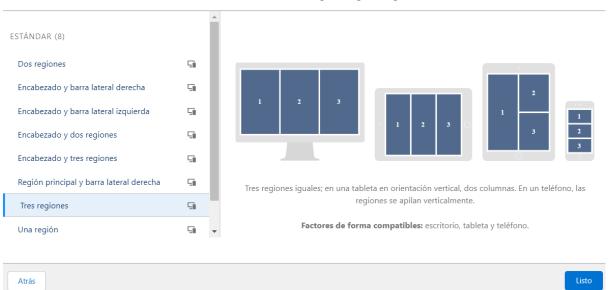

Escribimos el nombre de la página:

Crear una nueva Página Lightning

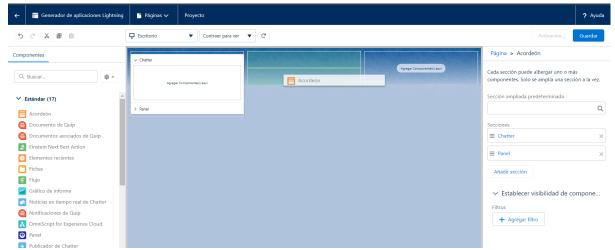

Elegimos la estructura por defecto que tendrá la página:

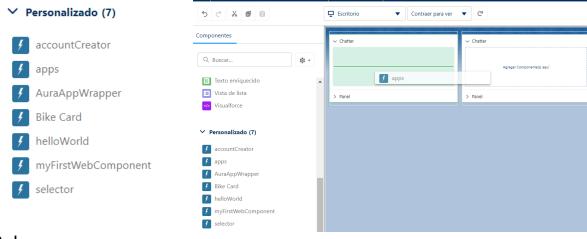

Crear una nueva Página Lightning

Creamos la página arrastrando los componentes:

Podemos añadir componentes estándar o personalizados.

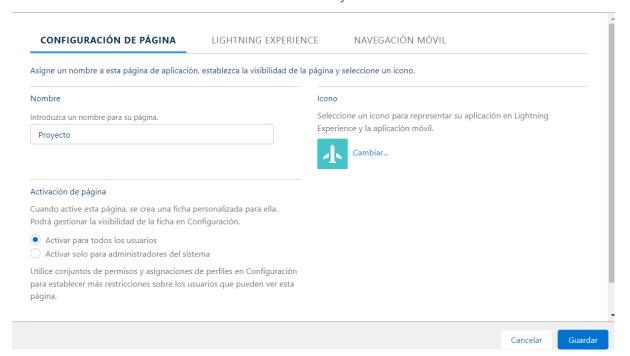

Pulsamos

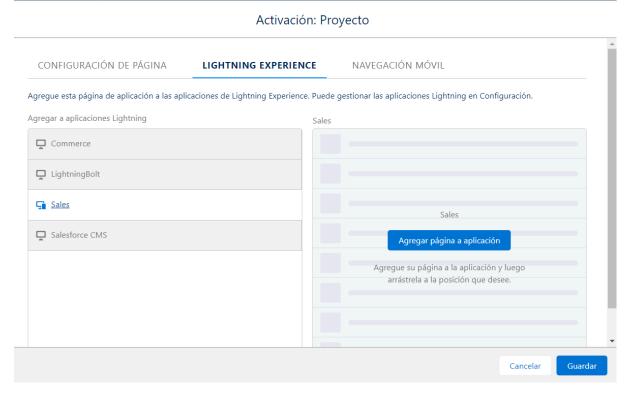

En activación nos sale la siguiente ventana:

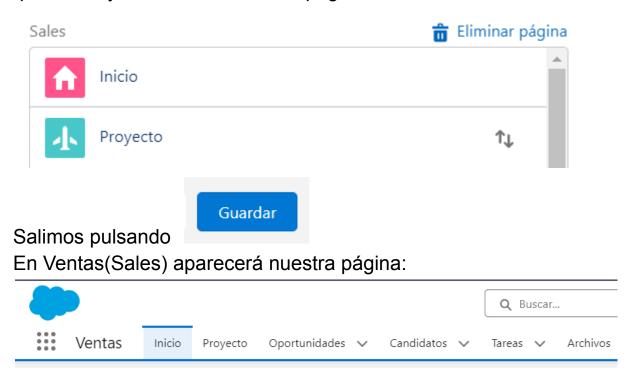

Activación: Proyecto

Donde podremos cambiar el nombre y el icono, Cambiamos a la pestaña:

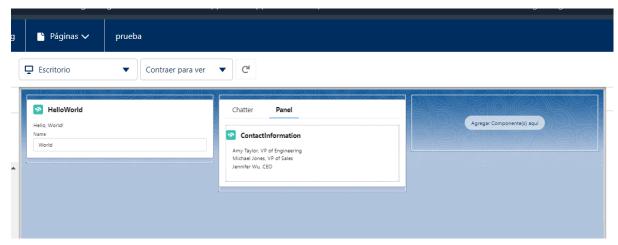

En la que elegiremos la aplicación creada por defecto que queramos y añadiremos nuestra página.

SEGUNDO MÓDULO LWC

Bucle for each con los contactos, en el fichero html

Vista desde Salesforce

TERCER MÓDULO LWC

Al no poner el targets (<targets>) no se mostrará en el generador de aplicaciones lightning.

LWC Bike, appBike y BikeCard LWC Bike

```
<template>
     <img src={bike.picture} alt="bike picture" />
     {bike.name}
</template>

import { LightningElement, api } from 'lwc';

export default class Bike extends LightningElement {
     @api bike;
}
```

LWC appBike

```
import { LightningElement } from 'lwc';

export default class Appbike extends LightningElement {
    bike = {
        name: 'Electra X4',
        picture: 'https://s3-us-west-1.amazonaws.com/sfdc-demo/ebikes/electrax4.jpg'
    };
}
```

LWC BikeCard
El archivo HTML

El javaScript

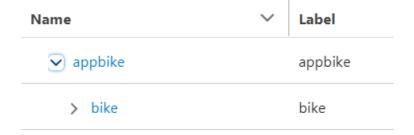

```
import { LightningElement } from 'lwc';

export default class BikeCard extends LightningElement {
    name = 'Electra X4';
    description = 'A sweet bike built for comfort.';
    category = 'Mountain';
    material = 'Steel';
    price = '$2,700';
    pictureUrl = 'https://s3-us-west-1.amazonaws.com/sfdc-demo/ebikes/electrax4.jpg';
}
```

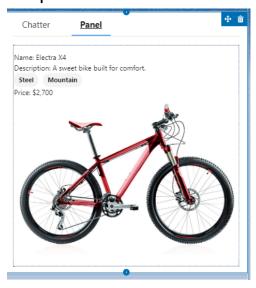

El archivo con las configuraciones necesarias para mostrar el componente en la creación de aplicaciones lightning

Se ve como appBike depende de Bike:

Lo que muestra el BikeCard

Selectionar una bici LWC Selector

```
> main > default > lwc > selector > 🥫 selector.
body {
 margin: 0;
.wrapper{
 background: ■#ccc;
 flex-direction: column;
 height: 50px;
background: ■rgb(255, 255, 255);
 color: □rgb(46, 46, 46);
 font-size: x-large;
 padding: 10px;
 background: ■#999;
 color: □#000;
.columns{
  display: flex;
 background: ■#eee;
  background: ■#ccc;
```

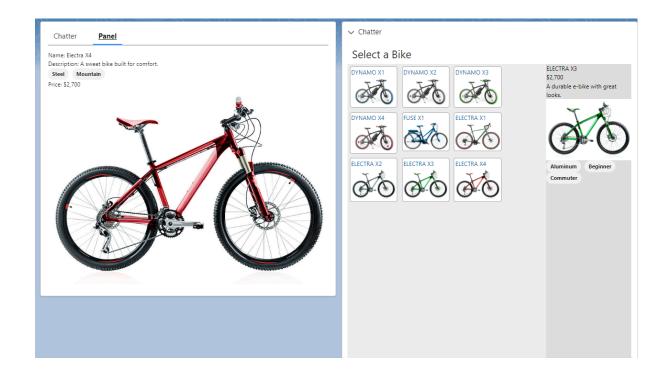

```
import { LightningElement } from 'lwc';

export default class Selector extends LightningElement {
    selectedProductId;

    handleProductSelected(evt) {
        this.selectedProductId = evt.detail;
    }
}

<pre
```

CUARTO MÓDULO LWC

Los archivos '.js-meta.xml' serán:

LWC AccountCreator

HTML

```
colonic content c
```

JavaScript

```
> main > default > lwc > accountCreator > JS accountCreator.js > ..
import { LightningElement } from 'lwc';
Alejandro ShowToastEvent } from 'lightning/platformShowToastEvent';
import ACCOUNT_OBJECT from '@salesforce/schema/Account';
import NAME_FIELD from '@salesforce/schema/Account.Name';
import REVENUE_FIELD from '@salesforce/schema/Account.AnnualRevenue';
import INDUSTRY_FIELD from '@salesforce/schema/Account.Industry';
export default class AccountCreator extends LightningElement {
    objectApiName = ACCOUNT OBJECT;
    fields = [NAME_FIELD, REVENUE_FIELD, INDUSTRY_FIELD];
    handleSuccess(event) {
        const toastEvent = new ShowToastEvent({
            title: "Account created",
            message: "Record ID: " + event.detail.id,
            variant: "success"
        this.dispatchEvent(toastEvent);
```

LWC wireGetRecordProperty / wireGetRecordFunction JavaScript

```
import { LightningElement, api, wire } from 'lwc';
import { getRecord, getFieldValue } from 'lightning/uiRecordApi';
import ACCOUNT_NAME_FIELD from '@salesforce/schema/Account.Name';
export default class WireGetRecordProperty extends LightningElement {
    @api recordId;
    @wire(getRecord, { recordId: '$recordId', fields: [ACCOUNT_NAME_FIELD] })
    account;
    get name() {
        return getFieldValue(this.account.data, ACCOUNT_NAME_FIELD);
    }
}
```

HTML

```
<template>
    Account Name: {name}
</template>
```

JavaScript

```
import { LightningElement, api, wire } from 'lwc';
import { getRecord, getFieldValue } from 'lightning/uiRecordApi';
import ACCOUNT_NAME_FIELD from '@salesforce/schema/Account.Name';
export default class WireGetRecord extends LightningElement {
   @api recordId;
   data;
    error;
    @wire(getRecord, { recordId: '$recordId', fields: [ACCOUNT NAME FIELD] })
   wiredAccount({data, error}) {
        console.log('Execute logic each time a new value is provisioned');
        if (data) {
            this.error = undefined;
        } else if (error) {
            this.error = error;
            this.data = undefined;
    get name() {
        return getFieldValue(this.data, ACCOUNT NAME FIELD);
```

QUINTO MÓDULO LWC

Para este módulo hemos creado otro proyecto de Salesforce llamado: ComunicacionEventos

LWC Numerator HTML

JavaScript

```
import { LightningElement, api } from 'lwc';

export default class Numerator extends LightningElement {
    // counter = 0;
    //@api counter = 0;
    currentCount = 0;
    priorcount = 0;
    @api
    get counter() {
        return this._currentCount;
    }
    set counter(value) {
        this.priorCount = this._currentCount;
        this._currentCount = value;
    }

    handleIncrement() {
        this.counter++;
    }
    handleDecrement() {
        this.counter--;
    }
    handleMultiply(event) {
        const factor = event.detail;
        this.counter *= factor;
    }
    @api
    maximizeCounter() {
        this.counter += 1000000;
    }
}
```

LWC Controls JavaScript

```
import { LightningElement } from 'lwc';

export default class Controls extends LightningElement {
    factors = [0,2,3,4,5,6];
    handleAdd() {
        this.dispatchEvent(new CustomEvent('add'));
    }
    handleSubtract() {
        this.dispatchEvent(new CustomEvent('subtract'));
    }
    handleMultiply(event) {
        const factor = event.target.dataset.factor;
        this.dispatchEvent(new CustomEvent('multiply', {
            detail: factor
        }));
    }
}
```

HTML

```
dightning-card title="Controls" icon-name="action:upload">
     dightning-layout>

</pr
              label="Subtract"
              icon-name="utility:dash"
              onclick={handleSubtract}>
        </lightning-button>
</lightning-layout-item>
</lightning-layout-item flexibility="auto" padding="around-small" onbuttonclick={handleMultiply}>
<template for:each={factors} for:item="factor">
                key={factor}
                 label={factor}
                 data-factor={factor}
                 icon="utility:close">
            </c-button>
</template>
         </lightning-layout-item>
        dightning-layout-item flexibility="auto" padding="around-small">
lightning-button
             label="Add"
              icon-name="utility:add"
              onclick={handleAdd}
              icon-position="right">
  </lightning-button>
</lightning-layout-item>
</lightning-layout>
</lightning-card>
```

LWC Button JavaScript

```
import { LightningElement,api } from 'lwc';

export default class Button extends LightningElement {
    @api label;
    @api icon;
    handleButton(event) {
        this.dispatchEvent(new CustomEvent('buttonclick',{
            bubbles: true// Se necesita para que funcione el multiplicador
        }));
    }
}
```

```

LWC Augmentor HTML

```
<template>
    dightning-card title="Augmentor" icon-name="action:download">
        <lightning-layout>
         dightning-layout-item flexibility="auto" padding="around-small">

≺lightning-input

              label="Set Starting Counter"
              type="number"
              min="0"
              max="1000000"
              value={startCounter}
              onchange={handleStartChange}>
              dightning-button
              class="slds-var-p-vertical xx-small"
              label="Add 1m To Counter"
              onclick={handleMaximizeCounter}>
             </lightning-button>
            </lightning-input>

≺lightning-button

          class="slds-var-p-vertical_xx-small"
          label="Add 1m To Counter"
          onclick={handleMaximizeCounter}>
        </lightning-button>
          </lightning-layout-item>
        </lightning-layout>
        <c-numerator</p>
          class="slds-show slds-is-relative"
          counter={startCounter}>
        </c-numerator>
      </lightning-card>
</template>
```

JavaScript

```
import { LightningElement } from 'lwc';

export default class Augmentor extends LightningElement {
    startCounter = 0;
    handleStartChange(event) {
        this.startCounter = parseInt(event.target.value);
    }
    handleMaximizeCounter() {
        this.template.querySelector('c-numerator').maximizeCounter();
    }
}
```

Creamos una carpeta en /default llamada messageChannels que contiene este archivo llamado: Count_Updated.messageChannel-meta.xml

LWC remoteControl JavaScript

```
import { LightningElement, wire } from 'lwc';
import { publish, MessageContext } from 'lightning/messageService';
import COUNT_UPDATED_CHANNEL from '@salesforce/messageChannel/Count_Updated__c';
export default class RemoteControl extends LightningElement {
 @wire(MessageContext)
 messageContext;
 handleIncrement() {
   const payload = {
     operator: 'add',
      constant: 1
    publish(this.messageContext, COUNT UPDATED CHANNEL, payload);
  handleDecrement() {
   // this.counter--;
   const payload = {
     operator: 'subtract',
      constant: 1
    publish(this.messageContext, COUNT_UPDATED_CHANNEL, payload);
  handleMultiply(event) {
    const factor = event.detail;
    const payload = {
     operator: 'multiply',
      constant: factor
    publish(this.messageContext, COUNT UPDATED CHANNEL, payload);
```

HTML

LWC Counts JavaScript

```
import { LightningElement, wire } from 'lwc';
import { subscribe, MessageContext } from 'lightning/messageService';
import COUNT_UPDATED_CHANNEL from '@salesforce/messageChannel/Count_Updated__c';
export default class Counts extends LightningElement {
  subscription = null;
  priorCount = 0;
  counter = 0;
  @wire(MessageContext)
  messageContext;
  subscribeToMessageChannel() {
    this.subscription = subscribe(
  this.messageContext,
      COUNT UPDATED CHANNEL,
       (message) => this.handleMessage(message)
  handleMessage(message) {
    this.priorCount = this.counter;
    if(message.operator == 'add') {
       this.counter += message.constant;
    }else if(message.operator == 'subtract') {
      this.counter -= message.constant;
    } else {
       this.counter *= message.constant;
  connectedCallback() {
    this.subscribeToMessageChannel();
```
